Acquirers & Merchants

Collis Brand Test Tool

The Collis Brand Test Tool provides a unique solution enabling automatic validation of the payment brand test cases for any EMV and/or Contactless acceptance device.

Collis Card Spy

The Collis Card Spy provides you with the ability to capture the communication between a physical EMV/Contactless chip card and a terminal. In addition, this enables performance testing of the transaction.

Collis Card Simulator

The Collis Card Simulator provides true card simulation by emulating all the functions of an actual EMV contact and/or Contactless chip card.

Collis Interac Terminal FTT

The Collis Interac Functional Test Tool enables the automatic validation of the Interac test cases for any EMV and/or Flash acceptance device.

Collis Card Image Editor

The Collis Card Image Editor is a comprehensive suite for viewing and editing EMV and Contactless card image data. The edited images can then be used in the card simulator for EMV and/or Contactless device testing.

Collis Card Image Editor

The Collis Card Image Editor is a comprehensive software for editing EMV card data. The value of such a solution from an Acquirer's or Merchant's perspective is high when you consider the difficulty of testing acceptance devices with physical cards. Risks such as damaging or losing the cards along with distribution costs don't help the situation. Add to this the complications involved with card-inventory management - obtaining specific test cards for specific test requirements - and it becomes clear why the Collis Card Image Editor can be an important addition to your Collis portfolio.

Collis Personalisation Validation Tool

The Collis Personalisation Validation Tool (Collis PVT) is a user-friendly tool designed to prove your cards are personalized correctly. It is the most thorough, comprehensive testing tool available in the market today.

The Collis PVT helps you pass the mandatory card personalisation regulations from the payment associations. All Visa, MasterCard®, JCB (test) specifications are covered in the Collis PVT. Based on Collis' extensive consulting experience, the Collis PVT includes tests defined by Collis over and above the mandated specifications. This helps to ensure that you have correctly personalised and interoperable cards.

COLLIS PVT

Additional Information

Contactless Support

The Collis PVT also supports personalisation of contactless cards such as:

- MasterCard (PayPass™ Magstripe & M/Chip)
- Visa (qVSDC, MSD, Wave)
- JCB (J/Speedy)

An Official Tool

Collis' PVT has been developed in close cooperation with Visa, MasterCard and JCB. It is officially confirmed and used by Visa and JCB. It is also the first tool qualified as a MasterCard Card Personalisation Validation (CPV) Testing Tool to prepare the formal certification.

Collis Interac Card Functional Test Tool

The Collis Interac Card Functional Test Tool is a certified stand alone module based on the Collis Conclusion Test Platform. The Collis Interac Card FTT has been certified by Interac and is used by Issuers in order to certify their cards with Interac. By following the test cases in the Collis Interac Card FTT, the certification report is submitted to Interac as part of the certification process.

Any PC/SC compliant card reader or the Collis SmartLink Box can be used to read the card being tested.

Once a test has been completed, the tool will analyze the transaction data to determine if the pass criteria have been met. Results are marked for easy identification with a green check mark indicating success while a red X indicates failure.
