UL Card Image Editor

The UL Card Image Editor is a comprehensive piece of software for editing EMV card data. The value of such a solution from an Acquirer's or Merchant's perspective is high when you consider the difficulty of performing acceptance testing on devices using individual physical cards. Risks such as damaging or losing the cards along with distribution costs don't help the situation. Add to this the complications involved with card-inventory management - obtaining specific test cards for specific test requirements - and it becomes clear why the UL Card Image Editor can be an important addition to your UL portfolio.
